ECON 41: STATISTICS FOR ECONOMISTS - Summer 2018 Session A

Department of Economics, UCLA

El Hadi Caoui

Contact: Instructor’s email address is ecaoui@ucla.edu.

E-Mails: I will give the lowest priority to E-mail inquiries regarding announcements made in class, and E-mail inquiries that can be answered by reading this syllabus. Please make sure that your full name with proper capitalization and Economics 41 appear in the “Sender” and in the “Subject” lines; I routinely delete suspicious e-mails without opening them.

Lecture: Monday and Wednesday 10:45am-12:50pm, BUNCHE 2209A

Office Hour: Mon and Wed, 9:40-10:40am, Alper Room (BUNCHE 2265).

Description: This course is an introduction to the theory and practice of statistics with an emphasis on its use in economics. It will introduce basic statistical concepts such as random variables, probability distributions, estimation, confidence intervals and hypothesis testing.

Textbook: The textbook for the course is A Brief Course in Mathematical Statistics by Elliot A. Tanis and Robert V. Hogg (Prentice Hall).

Course Outline: Maple exercises need not be read or understood.

1. Probability
   a. Basic Concepts
   b. Methods of Enumeration – Only three topics including Sampling
      with Replacement, Combination, Binomial Coefficients
   c. Conditional Probability
   d. Independent Events
   e. [Skip Section 1.5 Bayes’s Theorem]

2. Discrete Distributions
   a. Discrete Probability Distributions – Topics include Mean, Variance,
      Sample Mean, and Sample Variance
   b. Expectations. [Unbiased estimation and Chebyshev’s inequality]
deferred until after continuous random variables.]

c. Special Discrete Distributions. Discuss only the definition of Poisson. [Skip relationship between binomial and Poisson. Skip every other distribution in the section.]
d. Linear Functions of Independent Random Variables. [Law of large numbers discussed later.]
e. Covariance [Skip the rest of Section 2.6 Multivariate Discrete Distributions]

3. Continuous Distributions
a. [Skip Section 3.1]
b. Continuous Probability Distributions. [No percentile]
c. The Normal Distribution [Skip Example 3.4-7]
d. (Optional) Estimation in the Continuous Case
e. Central Limit Theorem. [Skip every example except Example 3.6-1]
f. Approximations for Discrete Distributions. [Skip Example 3.7-5]

4. Applications of Statistical Inference
a. Chebyshev’s Inequality, Law of Large Numbers and Estimation
b. Section 3.3. Brief Introduction to chi-square, t- and F-distributions. No other distributions will be discussed.
c. Summary of Necessary Theoretical Results.
d. Section 4.2. Just discuss confidence intervals using T. Two-sample problems on pp 165-168 optional.
e. Confidence Intervals and Tests of Hypotheses
f. [Skip the rest of this chapter, i.e., 4.4-4.11]

5. [Skip Chapter 5]
6. [Skip Chapter 6]

Exams: There will be a mid-term exam on July 11th, and a final exam on August 1st. Both exams are in-class. The midterm will cover everything discussed during Week 1 and 2 time window. The final exam will cover every topic discussed, including the material covered in the midterm exam.

Rules for the midterm and final:

Both exams will be of the multiple choice format. You will be provided a Scantron form. You are required to bring a Canon LS-100TS calculator (no
other brand/type will be allowed). No baseball or other caps should be worn during the exam. Cell phone should be turned off and put away in your backpack. Write all answers on the scantron. If you erase on the scantron portion, write the answer over to the right-hand side of the scantron on the appropriate line.

**Evaluation:** Your final letter grade will be based on the weighted average of the homework assignments (there will be two of them), the midterm exam and the final exam. No other factor will be considered when your letter grades are determined. The weights given to the homework assignments, midterm and final examinations will be 10%, 40%, and 50%, respectively.

The letter grade will be based on a “curve”.

**Other Rules:** Consult the Common Syllabus, which can be found at: http://www.econ.ucla.edu/undergraduate/?p=commonsyllabus.
